

Corsearch

Brand Protection for
the new gTLD Space

After all of your trademarks are successfully validated within the TMCH, partner with Corsearch to handle all of your new gTLD Sunrise period registrations.

Corsearch offers Expanded gTLD Global Domain Watch packages that cover new gTLDs as they are launched.

THOROUGHLY PROTECT YOUR TRADEMARKS WITH CORSEARCH DOMAIN NAME WATCHING AND TRADEMARK CLEARINGHOUSE SERVICES

With ICANN's new gTLD program expected to add over 1,500 gTLDs to the internet, domain name monitoring will be a key component of your brand protection strategy — as the danger of cybersquatting and other infringing activities increases.

Corsearch helps brand owners prepare for these new risks by offering two services that work together to ensure full brand protection in the new internet landscape:

Trademark Clearinghouse (TMCH) Filing Service

Corsearch's TMCH Filing Service provides a robust management system that allows users to enter, review and submit trademarks quickly via the Corsearch.com platform.

Time Saving: Just enter a registration number to populate your Corsearch order form with the relevant trademark data drawn directly from Corsearch databases of official PTO information.

Intelligent: A complete list of acceptable domain labels is generated allowing you to simply choose the variations for which you would like to apply.

Accurate: Built in error-checking ensures all required fields are populated and that prohibited registration types are not submitted.

Informative: Receive email and platform alerts for any trademark claims notices, and quickly retrieve your Sunrise SMD file from your Corsearch.com account.

Expanded gTLD Domain Watch

Corsearch's new Expanded gTLD Domain Watch, a tool to uncover brand infringement, works hand-in-hand with the TMCH Filing Service for the Trademark Clearinghouse.

Prompt Notification: Domain registrations are monitored weekly, providing you timely information so you can act quickly.

Tailored Typo-Squatting Coverage: A sophisticated algorithm is leveraged to check for typographical prefix variations of the marks watched. Domain results are reported for websites maintained by cybersquatters, as well as infringing websites using marks in prefixes, suffixes and mid-word occurrences.

Who-Is Records: Who-Is information is provided for reported domain names where available.

Delivery Options: Choose to receive either e-mail notifications or e-mail notices alongside watch notices on the Corsearch platform.
